EarCheck[®]
Middle Ear Monitor

Help take the guesswork out of ear infections.

INTRODUCING EARCHECK[®] MIDDLE EAR MONITOR

It's not always easy to tell if your child has an ear infection. Especially since symptoms can vary. Now, with the touch of a button, EarCheck accurately and painlessly detects the presence of middle ear fluid, a key sign of an ear infection.

Used by pediatricians for years, EarCheck helps you determine when your child might have an ear infection and allows for more meaningful conversations with your child's doctor.

"Middle Ear Fluid is a Key Sign of an Ear Infection"

— Jerome Klein, MD, Professor of Pediatrics,
Boston University School of Medicine
